Casper:
The Friendly Anonymizer

friendly

Our specialized deep-learning model scours your documents for Personally Identifiable Information (PII) and anonymizes your data, replacing names, id numbers, photos, addresses and contact information

Full featured

- Replaces an address with a fake one in the same area
- Replaces names, Social Security # & other identifiable information
- Replaces the exact birthday, while maintaining age constancy
- Your choice to anonymize or show the professional & facility info
- Keeps all financial, medical, and quantitative data intact for your use
- Can redact, anonymize and delete sensitive data on a schedule that you specify
- Provides well documented API for integrations

In the cloud

Run our **generative model** inside our cloud for quick deployment, or host on your own, for complete control

Photosensitive

Casper finds photo ids and hides people's faces for total privacy

Better handwriting than your doctor

Casper can recognize & replace handwritten text, numbers and signatures

Compliant

Data Residency laws are changing fast. By anonymizing PII, we help you keep your information usable when operating in countries and states with strict regulations.

Casper ensures seamless **HIPAA and GDPR compliance** by anonymizing sensitive personal data, safeguarding privacy, and reducing regulatory risk.

GDPR

HIPAA

AICPA
SOC 2

Makes your data more useful

By anonymizing data, you can **send it to potential vendors and customers** for evaluation, while maintaining privacy

Your internal training is only as good as the data that you use. With Casper you can **train your staff on real scenarios** while hiding customer identities

Train your deep-learning models on actual data, while maintaining compliance by withholding any Personally Identifiable Information
